Product overview

The VirtualDVD is a web site that replicates the ease of use of a standard DVD interface. It allows users access to high quality video clips with the accessibility of the Internet or an Intranet.

The VirtualDVD can be used to deliver any training, promotional, or presentational video materials to any number of users simultaneously on any Internet connected computer or to audiences using a projector or interactive whiteboard.

The VirtualDVD includes one year free hosting. Most hosting packages limit the amount of information that you can transmit from your site, meaning that if too many visitors view the video clips, your whole web site may be suspended. Our hosting therefore is independent of your own hosting, and allows unlimited users to the Virtual DVD site.

Key selling points

- Easy to use interface with video playback control panels
- High quality, universally compatible video format
- Professionally designed, bespoke interface with your institutions branding
- Accessible from anywhere with an Internet connection
- The VirtualDVD can have new content added at any time
- One years hosting and maintenance included
